BASIC-ABSTRACT:

NOVELTY - A material for the processing of water containing heavy metals consists of a gel-like material in which an iron hydroxide (III) precipitate is fixed.

USE - For the removal of heavy metals such as arsenic and lead from waste water, underground water and river water.

ADVANTAGE - The material simply and efficiently removes heavy metals such as arsenic and lead from water, even from water containing high concentrations of

salts such as calcium salts. The material is simple to prepare.
